embryonic shield stage (5.6 h) libraries. Fingerprint data were used to computationally cluster cDNAs, and a single cDNA from each cluster was chosen for sequencing. In some cases multiple members of the same cluster were sequenced to assess clustering parameters or single clones were sequenced additional times to assess quality

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence has been validated by Multiple Complete Digest Mapping. Comparison of the experimentally derived map digest fragments with sequence-predicted fragments is given below. Small fragments below a variable cutoff (approximately 400-600bp) are not mapped and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragment groups are separated by dashed lines.

This entry has been annotated with sequence quality estimates computed by the Phrap assembly program. All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                      Fred Hutchinson Cancer Research Center

Trequests: clonerequest@sanger.ac.uk

Trequests: clonerequest@sanger.ac.uk

The Nov 22, 1999 this sequence version replaced gi:6138775.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the

variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

only a small overlap as described above.

This sequence has been finished according to sequence map criteria

as follows. An attempt is made to resolve all sequencing problems,

such as compressions and repeats, but not necessarily within known

annotated human repeat sequence elements (e-g Alu). Where the

feature key.

feature key ambiguous, there is an annotation using the 'unsure'

feature key and the contract of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em.; EMEL; Sw.; SWISSPROY; Tr.; TREMEJ; Wp.; WORNERP; Information on the WORNERP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr1

RP1-144C9 is from the library RPcI-1 constructed at the Roswell Rari-144C9 is from the library RPcI-1 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further VECTOR: pcyPAC2.

This sequence is the entire insert of clone RP1-144C9.

On Jul 27, 1999 this sequence version replaced g1:5579004.
On Jul 27, 1999 this sequence version replaced g1:579004.
Where differences are found these are annotated as variations.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
EMB: Sw: SWISSPROT: Tr:, TREMB: WP: WORMPEP: Information on the WORMPEP database can be found at

HMMan DNA sequence from clone 858B16 on chromosome 22. Contains the KIAA0542 gene and a gene for a novel protein similar to hamster PSSC (Phosphatidylserine Decarboxylase Proenzyme, EC 4.1.1.65).
Contains ESTs, GSSs and a putative CpG island, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Db 36776 GACAGGGTATCACTCTGTTGCCCAAGCTAAAGTGCAGTTACATGATAATGACTCACTGTA 36835

                                                   This sequence was generated from part of bacterial clone contigs of human chromosome 22, constructed by the Sanger Centre Chromosome 22 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr22
BSBB16 is from the library RRC1-5 constructed at the Roswell Park Cancer Institute by the group of pleter de Jong. For further details see http://bacpac.med.buffalo.edu/ VECTOR: pCYPAC2
IMPORTANT: This sequence is not the entire insert of clone 85BB16. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /translation="QAILHAERQLLYRSWFWWHQQAAARHQEQEWQTVACAHHRHGRL

                                                                                                           * NOTE: This record contains 78 individual
* sequencing reads that have not been assembled into
* configs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* architrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
                                                                                                                                                                                                                                                                                            1583; gottig of 808 bp in length gap of unknown length 2371; contig of 788 bp in length gap of unknown length gap of unknown length gap of unknown length 3980; contig of 795 bp in length gap of unknown length

Direct Submission

Direct Submission

Direct Submission

Submitted (03-SEP-1999) Sanger Centre, Hinxton, Cambridgeshire,
CBIO [SA, WE. E-mail enquiries: humquery@sanger.ac.uk Clone
requests: clonerequest@sanger.ac.uk

On Jul 27, 1999 this sequence version replaced gi:5579000.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: EMEL: SW: SWISSPROT: Ir:, TREMEL: Mp:, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/Wormpep This sequence is
the entire insert of clone 773Al8. This sequence has been finished
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           HSJ773A18 128379 bp DNA PRI 23-NOV-1999 HUMAN DNA sequence from clone 773A18 on chromosome 1p13.2-21.1 CONTAINS GROSSIUS GENES FOR TAS-RELATED PROTEIN RAP-1A (C21KG) (KREV-1 PROTEIN) (GTP-BINDING PROTEIN) (G-22K), KCN3 (potassium voltage-gated channel, Shal-related subfamily, member 3), PROBABLE ATP-DEPENDENT RNA HELICASE P47 HOMOLOG, ESTS, STSS, GSSS and CpG AL049557

according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key.

This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chri
773A18 is from the library RPCI-4 constructed at the Roswell Park Cancer Institute by the group of Pleter de Jong. For further details see http://bacpac.med.buffalo.edu/ VECTOR: pCYPAC2.

Form: This is a "working draft' sequence. It currently consists of 34 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a "working draft' sequence. It currently consists of 31 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will: * be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         bp in length

* NOTE: This is a "working draft' sequence. It currently consists of 1 contigs. The true order of the pleces is not known and their order in this sequence record is a roth known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence sas soon as it is available and the accession number will

* be preserved.

on Jun 11, 1999 this sequence version replaced gi.4914529.
On Jun 11, 1999 this sequence version replaced gi.4914529.
Ouring sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations where differences are found these are annotated as variations are found the overlapping clone, as we submit sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
EMB: Sw:, SWISSPROT: Tr:, TREMB!
This sequence has been finished according to sequencing problems, such as compressions and repeats, but not necessarily within known amonotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'

I disorders, immune diseases, inflammation or blood disorders claim 1; Page 180-182; 380pp; English.

This sequence represents a nucleic acid molecule which encodes a secreted man protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion proteins by linking to the gene to a human immunoglobulin Fc portion of e.g. vol 302) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 86 novel genes and their fragments (nucleic acid sequences: XV4311-XV4410; amino acid sequences W7815-W7825) without are useful for preventing, treating or ameliorating medical conditions can be always determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynuclectides.

Specific uses are described for each of the 86 polynuclectides, based on
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human secreted protein game 16 clone HSHBO68.

PAR DIAGONAL CONSACK TO ALLES AND AGENOVIUS receptor - useful for modulation of e.g. cardiac, pancreatic or gastrointestinal infection PS Disclosure, Fig 14: 104pp: Engdish.

The present sequence encodes mouse coxsackievirus and adenovirus
CC compilation CAR expression comprising contexting the cell with an agent
CC such that a cell associated activity of CAR nucleic acid expression,
CC such that a cell associated activity is altered relative to a cell
CC such that a cell associated activity is altered relative to a cell
CC comprising contacting a biological sample with an agent capable of
CC detecting CAR protein or mRNA such that the presence of CAR is detected.
CC compilation of CAR is useful for treatment of cardiac infection of the
CC contrain nervous system. e.g. a non-specific febrile illness or
CC centrain nervous system. e.g. a non-specific febrile illness or
CC contrain nervous system. e.g. a non-specific febrile illness or
CC contrain nervous system. e.g. a non-specific febrile illness or
CC contrain nervous system. e.g. and antibodies raised against CAR
CN infection of the respiratory or gastrointestinal tract or childhood
CN onset diabetes mellitus. Probes derived from CAR nucleic acids are
CN include combining CAR protein assays, and antibodies raised against CR include combining for drugs which interact with CAR protein.
CN in screening for drugs which interact with CAR protein.
CN in screening for drugs which interact with CAR protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The model cycle regulating proteins bind to cyclin dependent kinase real cycle regulating proteins bind to cyclin dependent kinase real cycle regulating acids, antibodies etc., used in diagnosis and related nucleic acids, antibodies etc., used in diagnosis and the relation of the protein plant colling protein plants.

Colling (19264) coding for the mouse cell-cycle regulatory (CCR) colling plants for the mouse cell-cycle regulatory (CCR) colling plants as isolated from an embryonal carcinomal library using a probe based on a mouse CCR pla.5 cDNA (192965).

Colling plants are cell proliferation; to breed transgenic confinals to study cellular disorders involving CCR allele colling colling colling disorders involving CCR allele colling co
                                                                                                         01-MAR-1996 (first entry)
Cell-cycle regulatory protein p15 cDNA.
Cell-cycle regulatory protein p15; cyclin-dependent kinase inhibitor;
CCR; gene therapy; transgenic animal; cancer; cell proliferation;
SS; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            128 GCGGIGGCCAGGCCCGCGCAACACACATGCCCTIGTCCCGGCTGIGGC 69

ovary, plutiary, retina and colon cDNA libraries
or dayary, pretina and colon cDNA libraries
or claim 1; page 210; 633pp; English.
This sequence represents an expressed sequence tag (EST), and is a
claim 1; page 210; 633pp; English.
This sequence represents an expressed sequence tag (EST), and is a
colonucleotide of the invention. The polynucleotides of the invention are
polynucleotide EST sequences isolated from a variety of human tissue
all secreted EST sequences and proteins encoded by them are preditted to
have useful biological activities which would make them suitable for
treating, preventing or ameliorating medical conditions in humans and
animals, although no supporting data is given. Suggested activities
animals, although activity, immune stimulating or suppressing activity,
haematopolesis requiating activity, tissue growth activity,
activin/inhibin activity, chemotactic/chemokinetic activity, anti-inflammatory
activity, cacherin/tumour invasion suppressor activity, tumour inhibition
entivity. The EST sequences are also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

Cserves as a cellular receptor for adenoviruses of the serotypes 2 cand 5 (subgroup C) and for the group B coxsackleviruses (CVB). It was obtained by screening a lambda phage expression cDNA library with antiserum containing antibodies specific for mouse CVB.

Chinding protein p46, and was used to identify human HCAR CDNA (see V50429). The invention also provides host cells transformed with DNA molecules encoding HCAR or NCAR and methods of producing the recombinant proteins or their derivatives. These proteins, their extracellular domains, as well as oligopertides (see W69699-708) which bind virus, are also provided. Isolated HCAR or WGAR proteins or their fragments or variants are used to prevent or these viral receptors renders the cells susceptible to these viral receptors renders the cells susceptible to

The CDNA encodes ApoB4L, a protease catalyzing the formation of the abnormal beta/A4 variant of beta-amyloid protein, which is used to develop an inhibitor for the diagnosis and teatment of Alzheimer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New beta 1,6-N-acetyl glucose aminyl transferase - useful in sugar synthesis and for identification of cancer inhibitors, also claim 2; Page 16; 30pp; English.

DNA encoding this enzyme may be introduced into cells for box encoding this enzyme may be introduced into cells for expression. The resulting enzyme may be used to introduce, homogeneously, beta(1-6) branch structures into oligosaccharides. The enzyme may also be used to secreen for specific inhibitors gequence 2095 BP; 602 A; 481 C; 492 G; 520 T;

The encoded protein is used to treat subjects who are deficient in apolipoprotein-E (or who produce abnormal forms of this molecule) and therefore are likely to suffer from hyperlipidemia, resulting in arterioscierosis. It can also be used to raise antisera for detecting the protein deficiency or production of abnormal forms. Sequence 1110 BP; 198 A; 354 C; 415 G; 143 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  579 GAGCGCGCCTCAGCGCCATCCGCGAGCGCCTGGGGCCCCTGGTGGAACAGGGCCCGCTG 638

Proteins and nucleic acids associated with Alzheimer's disease - teated develop products for diagnosis of Alzheimer's disease and related conditions, hyperlipoproteinsemia or cardiovascular disease and related conditions, hyperlipoproteinsemia or cardiovascular disease (Claim 9; Fig 34, 67pp; English.

C. 2 Open reading frames (T18068 and T18069) identified in the apolipoprotein E (ApoE) antisease sequence code for proteins apolitoprotein E (ApoE) antisease sequence code for proteins apoELL (R92113) and apoELLI (R92114), respectively. Both ORFs care transcribed from an upstream requistory region (T18074).

ApoE4 comprises 2 alleles, one of which causes E4L and E4L1 to combine to form a hybrid ORF, ApoE4xx2 (T18070). Elucidation of the administrance of these and other sequences (see also T18065-77) in the actiology of Alzheimer'a disease (AD) provides means for diagnosing AD and related diseases, for the design of therapeutic themselves.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               305 GAGCGCGGCCTCAGCGCCATCCGCGAGCGCCTGGGGGCCCTGGTGGAACAGGGCCGCGTG 246

Claim 13; Fig 6A; 67pp; English.

2 Open reading frames (T18068 and T18069) identified in the apolitoprotein E (ApoE) antisense sequence code for proteins apoELL (R92113) and apoELL (R92114), respectively. Both ORFs are transcribed from an upstream requiatory region (T18074).

ApoEC comprises 2 allels, one of which causes ELL and ELL1 to combine to form a hybrid ORF, ApoELLS. (T18070). Elucidation of the significance of these and other sequences (see also T18065-77) in the actiology of Alzheimer's disease (AD) provides means for diagnosing AD and related diseases, for the design of therapeutic reagents (e.g. ribozymes or antibodies) and potentially for gene therapy.

Sequence 8, Application US/08405230
Patent No. 5707846
GENERAL INFORMATION:
APPLICANT: TANGGUEH, Nacyuki
APPLICANT: TANGGUEH, No. 5707846cmi
TITLE OF INVENTION: NOVEL N-ACETYLGLUCCSAMINYL TRANSFERASE
TITLE OF INVENTION: GENE CODING THEREFOR AND PROCESS FOR PRODUCTION THEREOF
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
ADDRESSE: Burns, Doane, Swecker & Mathis
STREET: George Mason Bidg., Washington & Prince Sts.
CITY: Alexandria
STATE: Virginia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 4, Application US/08665647

Patent No. 5935803

GENERAL INFORMATION:
APPLICANT: Dasquez, Nicki J.
APPLICANT: Ron, Dorit
APPLICANT: VOTONOVA, Anna F.
APPLICANT: Napolitano, Eugene W.
TITLE OF INVENTION: METHODS TO IDENTIFY IMMUNOMODULATORS
TITLE OF INVENTION: USING COGNATE INTERACTION OF PRC-THETA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            45 GCCACTATGGGGTCTGGGCTGCCCTTGTCCTCCTTGACCCTCCTTGG 94

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1, Application US/08494168
Patent No. 5731192
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Zhou, Jing
TITLE OF INVENTION: Collagen COL446: Gene, Protein and Method
TITLE OF INVENTION: of Detecting Collagen Deficiency
NUMBER OF SEQUENCES: 10
